ASP .NET   ASP .NET CORE   C#   JavaScript

jQuery   HTML   CSS   Bootstrap   ADO .NET

Dapper   REST APIs   SQL Server   GitHub

SourceTree   Gitbash   LINQ   Swagger & Postman

SignalR   Window and Worker Services   Visual Studio

Visual Studio Code   SSMS   OOP   JIRA   Agile

React   TypeScript

COMPANY PROJECTS

Smart Health Care Management System

- It is Web application based solutions that serve people by facilitating the connection between patient and doctor with the help of collecting and analyzing health parameters. I have been working on different modules of the system e.g. User Management, Attendance Management, Appointment Management, Digital Prescription, Integration of the doctor analysis with laboratory and pharmacy. I also worked on Realtime financial reports using SignalR and many other smart modules.

Work Force Management Solutions (Netherlands)

- WFM involves effectively forecasting labor requirements and creating and managing staff schedules to accomplish a particular task on a day-to-day and hour-to-hour basis. As a developer I worked on different modules of the system e.g. User Management, Leave Management, Location based working queues, real time hourly/daily/weekly scheduling based on forecasting and user working ques. Collecting data, analyzing and sending finalized data sets to scheduling engine and processing the engine response. Also worked on reports for different level of managers to show results accordingly.
